

What is claimed is,

1. A dental composition, containing (a) a polymerizable compound having an acidic group, (b) a reducing agent, (c) water and (d) an aluminum oxide powder.

2. The dental composition according to Claim 1, wherein 0.4 mol equivalent or less of the acidic group of (a) the polymerizable compound having the acidic group and 0.05 mol equivalent or less of a reduction part of (b) the reducing agent are contained per 100 m<sup>2</sup> of a specific surface area of (d) the aluminum oxide powder.

3. The dental composition according to Claim 1 or Claim 2, comprising,

5 to 35 weight parts of (a) the polymerizable compound having the acidic group,

0.1 to 5 weight parts of (b) the reducing agent,

10 to 55 weight parts of (c) water, and

0.1 to 5 weight parts of (d) the aluminum oxide powder.

4. The dental composition according to any one of Claim 1 to Claim 3, further containing 0.1 to 7 weight parts of (e) a sensitizer.

5. The dental composition according to any one of Claim 1 to Claim 4, further containing at least one

of 10 to 45 weight parts of (f) a polymerizable compound not having an acidic group, 10 to 45 weight parts of (g) an organic solvent and 0.1 to 15 weight parts of (h) a filler other than the aluminum oxide powder.
